

Solates – Technical Documentation v1.0

Vision, Architecture & Tokenomics Overview

Prepared by Xime Camino – Founder & Developer

Date: October 2025

1. Introduction

Solates is a decentralized learning and DeFi ecosystem built on **Solana**. Its mission is to empower individuals through transparent education, gamification, and real financial tools. By bridging learning and earning, Solates turns blockchain education into a rewarding, sustainable experience.

2. Ecosystem Overview

The Solates ecosystem unites three fundamental layers: **DeFi Layer:** On-chain portfolio tracking, liquidity alerts, and the upcoming Mining Hall. **Learning Layer:** Quests, XP, and progress-based education for all user levels. **Token Layer:** The \$OLA token powers rewards, staking, governance, and future DAO mechanics. Future integrations include cross-chain expansion (Base, Polygon), mobile apps, and APIs for third-party partners.

3. Tokenomics

The **\$OLA** token is the economic engine of Solates. It connects learning, governance, and DeFi participation. **Total Supply:** 100,000,000 \$OLA (fixed, no additional minting) **Distribution:** Community & Airdrops 15%, Staking & Rewards 25%, Treasury 30%, Team 15%, Liquidity 15% **Utilities:** Learn-to-earn rewards, staking boosts, premium feature access, and governance voting. **Vesting:** Team tokens vest linearly over 12 months with a 3-month cliff.

4. Airdrop Program

The **Solates Airdrop Program** rewards genuine engagement instead of speculative activity. It is structured through a **Point System** and transparent reward distribution: **Point System:** Users earn XP for profile setup, quests, and daily activity. **Ranks:** From Explorer (x1.0) to Diamond Pioneer (x2.0 multiplier). **Rewards:** 15% of \$OLA total supply reserved for active learners. **Claim Process:** Rewards claimable after TGE, unclaimed tokens return to the growth fund.

5. Roadmap 2025–2026

The roadmap defines Solates' growth through education, DeFi integration, and governance. **Q4 2025:** MVP Launch with quests, user onboarding, and first dashboard release. **Q1 2026:** \$OLA Token Deployment & Mining Hall introduction. **Q2 2026:** DAO Governance Layer and proposal voting system. **Q3 2026:** DeFi Hub with portfolio tracking and yield analytics. **Q4 2026:** Global partnerships, institutional onboarding, and API expansion.

6. Conclusion

Solates stands as a bridge between decentralized finance and meaningful learning. It combines education, gamification, and real blockchain tools under one purpose — to empower users to grow both intellectually and financially in the Web3 era.
